Profile

I run the **full research arc** in enterprise B2B SaaS; foundational work to decide if something's worth building, concept testing to validate direction, usability testing to validate execution. I've co-built **insight repositories, research documentation standards, and reusable frameworks adopted company-wide**, and I use **AI tools across the research workflow**, validating outputs against raw data. Trained in both design and research at **TU Delft**; I have worked with globally distributed teams across **Europe, the US, and APAC**, collaborating closely with **designers, product managers, and engineers** to ensure user insights are integrated into decision-making.

Professional Experience

Senior UX Researcher 08/2026 – Present | Bangalore, India

OneTrust

• Dedicated researcher for **OneTrust's flagship** Consent, Privacy, and Risk products, partnering with globally distributed Product and Design teams.

• Within the first weeks, coordinated with global teams across Consent, Privacy, and Risk to deliver an **end-to-end study for a major customer event**; from study plan through **prioritisation** and final report; informing **key strategic decisions in leadership** meetings.

Senior User Researcher 05/2022 – 05/2025 | Bangalore, India

Whatfix, Bangalore

Owning research, validation & driving product decisions

- Owned end-to-end research for Whatfix Mirror from a **standing start with no market signal**; defined the research process and translated findings into a strategic narrative that shaped roadmap and design decisions**, presented directly to the VP of Product**, Engineering, Design Manager, and PM; connecting research craft directly to business goals and success metrics & contributing to a **500% revenue increase.**
- Delivered **no-go recommendations**, backed by decision frameworks, directly to the **VP of Product and CTO** on expansion initiatives; spanning **regulated industries like BFSI**; **halting investments** before resources were staffed on these initiatives which hadn't found product-market fit.
- **Pushed back on a brief** scoped to usability testing alone for the Whatfix Dashboard; **partnered cross-functionally** with Design and Engineering to **expand research scope beyond usability into concept-level gaps**, led a one-month sprint that helped drive adoption from **8 to 700 users.**
- Spearheaded generative research on AI integration with **no PM in place** and no one asking me to; **defined product use cases independently**, built a decision framework that **set MVP direction before the product existed**, and shared it **org-wide as a reusable narrative informing multiple AI initiatives**.

Building the research & ops function

Co-built the **research and operations function** at Whatfix from the ground up; a combination of programs and frameworks (below) that together drove a **160%** rise in research activity, a **55%** increase in teams actively using research insights, and **measured greater team confidence** in running research, confirmed through internal surveys.

- Established the UX Research foundation as the **first researcher at Whatfix India**, setting up research processes and best practices from the ground up, building re-usable templates and frameworks (especially around Discovery Research) adopted company-wide.
- Designed and ran the **participant sourcing strategy** for research studies; **building multi-channel pipelines** (LinkedIn Sales Navigator, UserInterviews, Customer Forums etc.) and cross-functional partnerships with CSMs and PMs to source qualified participants fast, **with no dedicated ops function** in place.
- Served as the primary researcher voice in **vendor partnerships** (Userology, Maze), shaping product improvements through structured feedback.
- Co-built and scaled; **participant panels within UserInterviews' User Hub**, creating a reusable, pre-screened participant pool that cut sourcing time across studies, and **Product Board–based insight repository**, translating research findings directly into product and business decisions company-wide.
- **Co-led Every Person is a Researcher, a company-wide program** to scale research literacy across Design, Product, and Engineering.
- **Independently initiated**, designed, and led a **Quality Assurance program**; without being asked to; **defining research governance and rigour standards that improved research quality across 60%** of the design team.
- **Mentored 40+ colleagues** and led hands-on workshops on research best practices, across Design, Product, and customer-facing teams, building shared research literacy and raising research maturity org-wide.

Design Research Graduate 03/2021 – 11/2021 | Delft, The Netherlands
The Art of Living Foundation, Delft
- **Independently scoped and led design and research project end-to-end**; from literature and field research through concept development to a validated prototype; with **no existing playbook to follow**.
- Identified, through early user interviews, that the original brief didn't match what the research was surfacing, and **made the call to rescope the project direction**.
- Designed and delivered a **user-centered tool to increase Art of Living SKY course enrolment** among Dutch young adults, owning the full arc from foundational research through validation.

Service Research & Design Intern 09/2019 – 01/2020
KLM Royal Dutch Airlines Amsterdam, The Netherlands
- **Co-led the research and redesign** of a cross-departmental product portfolio prioritization service, working with **VP-level** sponsorship **across all involved departments**.
- **Owned stakeholder research end-to-end**; running conversations across departments to surface differing priorities and align a **large, highly regulated organization** around a shared process.
- **Scoped and ran rapid research sprints calibrated to a short timeline** and significant organizational scale, going deep enough to inform the redesign **without over-researching**.
- **Delivered a final service redesign that exceeded stakeholder expectations** for its functionality, given the speed at which the organization was understood.

Education

MSc., Design For Interaction (HCI) (CGPA: 8.0) 09/2018 – 11/2021 | Delft, The Netherlands
Delft University of Technology, The Netherlands

B.Tech., Civil Engineering (CGPA: 8.4) 08/2012 – 06/2016 | Kanpur, India
Harcourt Butler Technological University, Kanpur

Skills

Research Strategy | Research Operations (ResearchOps) & User Panel Management | Foundational, Generative & Evaluative Research | Research Roadmapping | Executive Storytelling | Strategic Product Discovery | Decision Frameworks | Qualitative & Quantitative Research | Ethnographic Research | Survey Design | Behavioural Analytics | Contextual Inquiry | In-depth Interviews | Diary Studies | Journey Maps | Remote Moderated & Unmoderated Testing | Research Enablement & Training | Prototype Validation | Stakeholder Management | Usability & Concept Validation | Customer Feedback Loops | Executive & Cross-Functional Collaboration | Workshop Facilitation

Tools

- *Research & Synthesis*: SurveyMonkey, Productboard, LinkedIn Sales Navigator, Condens.io, Maze, UserInterviews, Zoom
- *Collaboration & Facilitation*: Figma, Mural/Miro, Atlassian Suite, Canva
- *AI-Assisted Research & Data Analysis*: Userology, Glean, Microsoft Copilot, Gemini, ChatGPT, Google AI Studio, Claude AI ecosystem
